Five-axis Machining Center

V-200U/V-400U

- ★ German technology plus high-precision DD direct drive rotarytable, original imported Siemens 5-axis CNC system
- ★ Combining industrial design elements and human-machine interaction considerations, the overall appearance design of the machine is aesthetically pleasing and has a neat and reasonable layout of operating positions, enhancing the human-machine interaction experience

Five-axis Machining Center

Technical Description of Equipment Structure

- ★ The main structure adopts portal O-shaped structure with high rigidity, the distance from spindle to cross beam is short, the structural design layout of B/C axis rotarytable is reasonable, and the lathe bed is made of high-quality gray cast iron material, which has the characteristics such as small overall stress and deformation and strong vibration resistance;
- ★ Combined with modern finite element analysis software, the rigidity of the main structure of the lathe bed is continuously optimized to achieve the optimal design;
- ★ German technology plus high precision DD direct drive rotarytable, high-rigidity rotarytable body structure, driven by torque motor, matched with high-resolution encoder, and the rotarytable is designed with reasonable cooling channel to ensure the transmission accuracy and stability;

Five-axis Machining Center

Upmarket and safe processing configurations

V-200U: Configured with 30T umbrella-shaped tool magazine

- ▶ Maximum tool length: 150mm
- ▶ Maximum diameter : $\Phi 40\text{mm}/\phi 60\text{mm}$ (full magazine/vacant adjacent slot)
- ▶ Maximum tool weight: 1.2kg

V-400U: Configured with 24T umbrella-shaped tool magazine

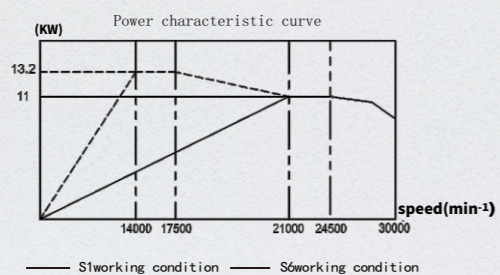

- ▶ Maximum tool length: 200mm
- ▶ Maximum diameter : $\Phi 50\text{mm}/\phi 100\text{mm}$ (full magazine/vacant adjacent slot)
- ▶ Maximum tool weight: 2kg

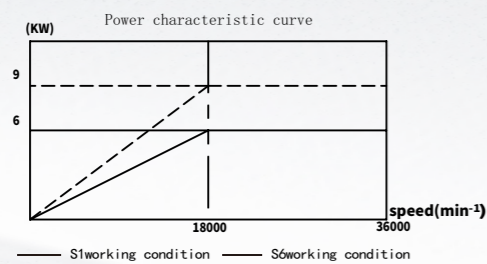

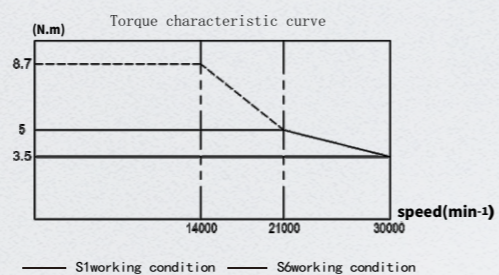

German technology plus high precision direct drive turntable

- 1** The B/C axis of the turntable is designed with a cast iron structure, which greatly improves its rigidity and seismic resistance
- 2** The B/C axis is equipped with a large torque frameless direct drive motor, with a compact structural design. The motor rotor is integrated with the rotary mechanism of the turntable, providing excellent transmission rigidity
- 3** The outer stator of the motor is cooled with coolant to ensure the thermal stability of the turntable
- 4** The maximum speed of B/C axis can reach 50r/min

Technical Description of Equipment Structure

- ★ The main structure adopts moving beam gantry structure with high rigidity, the distance from spindle to cross beam is short, three axis independent operation, and the lathe bed is made of high-quality gray cast iron material, which has the characteristics such as small overall stress and deformation and strong vibration resistance
- ★ Y-axis dual screw dual drive structure technology for optimal dynamic response performance
- ★ German technology plus high precision DD direct drive rotarytable, A-axis dual torque motor dual drive technology, matched with high-resolution encoder, and the rotarytable body is designed with reasonable cooling channel to ensure the transmission accuracy and stability
- ★ The A/C is fixed in the base and operates independently. It is designed with high rigidity and high load-bearing capacity, which can meet the needs of heavy cutting

Five-axis Machining Center

Upmarket and safe processing configurations

Configured with 40T chain tool magazine

- ▶ Maximum tool length: 300mm
- ▶ Maximum diameter : $\Phi 80\text{mm}/\phi 150\text{mm}$ (full magazine/vacant adjacent slot)
- ▶ Maximum tool weight: 8kg

German technology plus high precision direct drive turntable

- 1** Independently designed A/C-axis cradle turntable structure, A-axis dual torque motor drive has greatly improved in rigidity and seismic resistance
- 2** The A/C axis is equipped with a large torque frameless direct drive motor, with a compact structural design that integrates the motor rotor with the rotary mechanism of the turntable, providing excellent transmission rigidity
- 3** The outer stator of the motor is cooled with coolant to ensure the thermal stability of the turntable
- 4** The maximum speed of the A/C axis can reach 50r/min

Five-axis Machining Center

Virtual Lathe and Simulation System

* Virtual Machine Tool Cutting Verification Process

* Customer Value Reflected by Digital Native Machine Tools in Different Scenarios

Greatly improve the efficiency of workpiece trial production
 Shorten the trial production cycle of 30% of workpieces

Improve equipment utilization
 Equipment does not need to be shut down for trial production

Reduce training costs
 Avoid beginners using collision machines

Visualize providing cutting solutions and Real cutting time, cutting process.
 Improve sales winning rate

Five-axis Machining Center

SINUMERIK ONE Highlights

1 High-performance

- + Powerful multi-core UP technology
- + Due to the integration of S7-1500 PLC, the PLC cycle is 10 times faster
- + Two independent PROFINET networks

2 Security

- + SIMATIC S7 1500 Failsafe Function: Safety Logic
- + SINAMICS Safety built-in security motion monitoring

3 High efficiency

- + Top Speedplus: Faster mold processing
- + Intelligent Load Control
- + Interpolation car: complete turning on a milling machine to shorten the processing cycle

4 Flexible

- + New panel CNC for high-end compact models
- + Rich products: HMI, NCU, drives, and motors

5 Security

- + Protecting Data Security
- + Access and data acquisition management
- + Implementing security for new services and business models
